Exercise 11

已開始： 10月16日 11:03

測驗說明

問題 1	100 分數

Complete the slides **here (https://canvas.rice.edu/courses/59111/files/4986763?wrap=1)** ↓ **(https://canvas.rice.edu/courses/59111/files/4986763/download?download_frd=1)** . **Note that the SUBSYSTEM=="MES" part uses the class name. My class name was MES, yours may be different. When using the module for insertion and removal, you can use the most recent hello module we made.**

Show me or one of the TAs that inserting the hello module causes the time to print in /tmp/udev.log for you. This can be done with two terminal windows side by side, with one having tail -f /tmp/udev.log and the other showing you run sudo insmod hello.ko.
